

# BOE Facilities – AFB Proprietary Energy Management Program

AFB, in conjunction with the building staff and Engineering Department, has been constantly working to reduce energy consumption throughout the district.

## Reducing Energy Consumption

- Maintaining a system wide temperature set point
- Eliminating over heating and cooling
- Limiting run-times of heavy equipment
- Educating building manager on proactively embracing sustainable practice

## Commodity Purchasing

- Monitoring energy markets
- Getting right information to decision makers
- Constantly re-evaluating BOE commodity risk and purchasing strategies
- Planned budget reduction by locking in historically low electric rates (see right)
- Will be able to decrease budget, reinvest in equipment and continue to drive down energy consumption
- Sheltered from volatile energy markets
